Research Interests

DNA large language models; Security, safety and privacy of large language models.

Education

2019 – 2024 **Ph.D., Indiana University Bloomington**, Department of Computer Science

2017 – 2019 **M.S., Indiana University Bloomington**, Department of Statistics

2011 – 2015 **B.S., University of Utah**, Department of Mathematics

Work Experience

2026 Mar – Now **Applied Scientist II** in Amazon;
Medical Foundation Model; Built and trained a medical foundation model from scratch with multiple modules integrating heterogeneous data sources, including EHR records, claims data, drug SMILES, and patient genomic data. Processed massive datasets and optimized system performance for high-throughput workloads, adhering to stringent privacy and compliance requirements.

Affiliated Lecturer in Yale School of Medicine;

2024 Jun – 2026 Feb **Post-doctoral Researcher** in Yale University, School of Medicine, *Advisor: Dr. Lucila Ohno-Machado*;
DNA Large Language Model; Designed downstream applications based on a DNA large language model (Evo2): performed continued pretraining on human pan-genome data to "humanize" the model for human genetic variation. Conducted supervised fine-tuning and rigorous model evaluation for clinical (highly regulated) prediction tasks.
LLM Model Compression; Implemented model compression for the DNA LLM (Evo2) to enable more efficient inference on much longer genomic sequences, optimizing system performance and scaling solutions for high-stakes contexts.
Tabular Large Foundation Model; Built applications on top of the tabular foundation model TabPFN by fine-tuning it on clinical datasets, achieving performance that outperforms standard gradient-boosting–based methods.

2023 May-August **Software Engineer** in The Trade Desk
Adversarial Model; Developed a deep learning–based adversarial model to predict competitors (such as Google Ads) bidding for on-page impressions. Designed secure APIs, integrated the ML model with back-end systems, and deployed robust, scalable AI-driven solutions to production.

2018 May-August **Data Scientist** Union Pay Lab
Community detection; To build this community detection model. One patent was applied in this project(Patent number: CN09493086A, Patent page: http://www.soopat.com/Patent/201811261870).

Work Experience (continued)

2016 – 2017 **Data Scientist** in Lenovo;
Text Classification; Text classification model for online sentiment analysis of customer comments in e-commerce.
Fake Comments Detection in E-commerce; Identify whether a comment from e-commerce is from a real user or a machine.
Retailer Fraud Detection; To detect Insurance and warranty frauds in Retailers of Lenovo.

Teaching Experience

Lecturer **I599: Data Science on-ramp** – Fall 2019 - Fall 2020 (3 semesters)
I529: Machine Learning in Bioinformatics – Fall 2023 - Spring 2024

Achievements

Apr 2023 **Indiana University Bloomignton**: Best Research Assistant of the year 2022 in computer science department

Patent

community detection model

2018.11 Patent number: CN09493086A, Patent page: http://www.soopat.com/Patent/201811261870

Projects

TrojAI project by NIST and IARPA (DoD/DARPA equivalent)

2020.5 – 2024.5 In team Perspectra-IUB, Main contributor. Main weekly meeting reporter. Got 2 out of 16 teams in round 3 competition and 3 out of 16 teams in round 10 competition. Evaluated and assessed AI model vulnerabilities (Trojans/Backdoors). Developed robust evaluation frameworks to ensure AI safety and security under stringent government and DoD standards.

Publications
